Monitor

Committed Service levels

Maintain

Troubleshoot Nile, SW/Security Patch, Lifecycle Management

Imagine your network.

Now remove the complexities of planning, installing, monitoring, updating, troubleshooting.

Instead.

Imagine your network delivered to you as a service. Simply. Securely. And with the highest performance.

Add to that, an unprecedented level of service level commitments against high availability, end-to-end coverage, and ultimate capacity.

The **nile** Experience

1 Tell us what you need

Sites & building

2 We go to work

Plan, design, deploy, own

3 Experience & enjoy

SLAs for availability, coverage, and capacity

Connectivity should be secured and delivered as simply and reliably as electricity

Nile delivers secure connectivity for your local area network. Built on the principles of ultimate simplicity, ruthless automation, and inherent security, Nile provides an SLA-backed service consumed as a pay-per-user model.

Nile empowers IT teams and leaders to transition from reacting to tactical connectivity concerns to focusing on strategizing for future innovations, alongside C-suite leaders and decision makers.
