Drive a High-Tech Learning Environment with Nile

nile

Experience always-on Wi-Fi 6 connectivity with built-in security for your students and staff.

74% of teachers have digital game-based learning to enhance lessons.

83% of all 12- to 17-year-olds have a smartphone.

Today's classrooms are now high-tech learning centers that empower students to learn, collaborate, and solve problems. Traditional networks are not built for the influx of Chromebooks, tablets, and smartboards simultaneously accessing the internet for digital learning applications. Additionally, securing these minors' devices is a complexity. All this results in a lack of seamless connectivity that impacts learning ability, time, and cost

Nile provides high-performance wireless and wired network connectivity for your K-12 school, delivered entirely as a service.

GUARANTEED SERVICE LEVELS, FINANCIALLY BACKED

Nile delivers your network with guarantees that meet your needs. These service levels (SLAs) are calculated monthly to validate that thresholds are met.

Availability. We make sure your network is always-on – no glitches in the middle of learning.

Capacity. We deliver a WiFi6 network that is ready for the multitude of students' digital learning application access.

Coverage. We install a network that has end-to-end full site coverage, even in the hallways and staircases.

## A NETWORK THAT'S PLANNED-INSTALLED FOR YOU

Nile delivers your complete network as a service (NaaS). We come visit your site and plan for the best network capacity and coverage. Additionally, Nile service includes full installation costs.

ALL-INCLUSIVE, PREDICTABLE PAY-PER-USER COSTS

Pay for what you use. Nile helps eliminate high upfront hardware costs, that are then compounded with unpredictable add-ons, such as security components.

Nile delivers always-on, secure connectivity to your students and staff on a pay-per user model. A pay-as-you- go model that scales up and down as you use. This creates a more relevant, predictable cost model.

Organizations are adopting consumption services to gain these key benefits

Simplify device management	56%
Reduces IT and procurement workload	48%
Refresh devices at a faster cadence	48%
Safe and secure disposal	46%
Predictable cost model	43%

A NETWORK THAT'S SECURED & MAINTAINED FOR YOU

Engineered for zero trust, Nile is built for no un- authorized access to your network full of minors and no proliferation of malware.

To meet your SLAs, Nile monitors and maintains your network for you.

Software/Security Updates are automatically taken care for you.

Hardware Lifecycle Refreshes are planned for and taken care of by Nile.

Troubleshooting. If there are problems outside your Nile network, the Customer Portal helps you narrow down the issue, i.e. your ISP or application.

CASE STUDY: ST. ALBERT THE GREAT CATHOLIC SCHOOL

"Once Nile was installed, it was the first time that we didn't have any connectivity issues."

Rochelle Perez, computer technology teacher.

Teachers operated in spotty classroom coverage that had them planning for two lessons: one if there was connectivity, and one in case not. The Nile service resulted in full site coverage with seamless roaming and WiFi6 capacity everywhere.
