

A Network That Delivers, Guaranteed

You invest in building a network, expecting seamless connectivity, broad coverage, and reliable performance — but what guarantees do you actually receive?

With Nile, it's easy. Unlike traditional SLAs that only cover site-wide outages, our Service Guarantee is based on the end-user experience—not just infrastructure uptime. If any Nile component impacts the availability, coverage, or capacity of your users and their devices, we take responsibility.

Beyond a Promise: A Service Guarantee

Seamless connectivity for wired and wireless users without issues equals fewer support tickets that frees IT to focus on innovation instead of troubleshooting.

Availability

Uninterrupted wired and wireless connectivity

Coverage

Consistent, voice-grade WiFi coverage for all users and devices

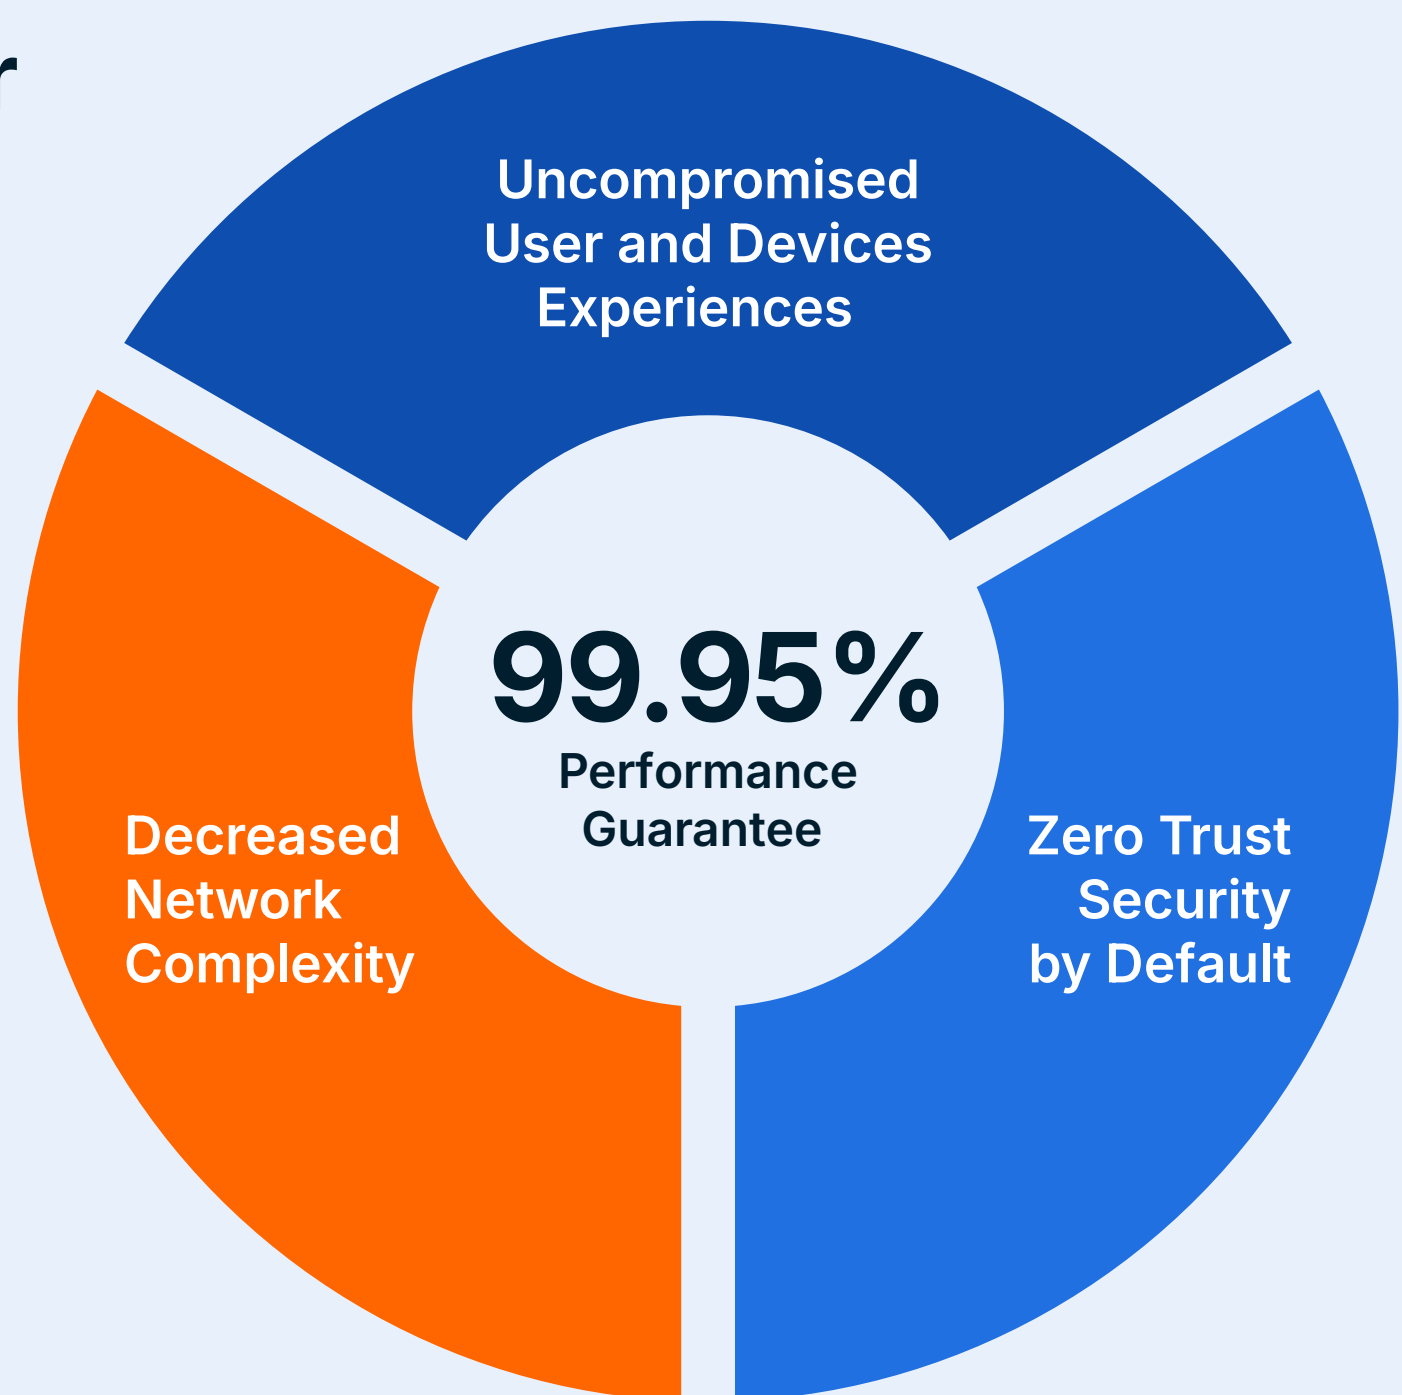

Capacity

Every user and device receives the latency and bandwidth they need

Flawless Connectivity for Every User, Every Time

Imagine a network that delivers the utmost service and security you need—where your data is protected, threats are stopped before they become problems, and compliance is never a fire drill.

- Uncompromised User and Device Experiences**
 Consistently optimized connections for all users, their devices and IoT
- Zero Trust by Default**
 Access control, and malware and threat protection without expensive add-ons
- Decreased Network Complexity**
 A standardized architecture with autonomous updates and optimization

Reliability & Security — By Design

A modern network architecture isn't just an upgrade—it's an advantage, delivering built-in resilience, airtight security, and uptime you can count on. Designed with robust redundancy and autonomous operations, Nile's Zero Trust Fabric ensures that even if a single network issue arises, users and devices maintain reliable, uninterrupted connectivity.

1

Standardized Network Architecture

A deterministic design that delivers simplicity, automation and predictability

2

Deep Telemetry and Instrumentation

Granular real-time visibility not found in disparate networks

3

AI-Powered Optimization

Identification and pre-emptive issues resolution before impacting users

4

Automated Service Management

Elimination of manual changes for faster, error-free operations

5

Autonomous Software Updates

Automatically delivers the latest features and security upgrades without manual intervention

6

Zero Trust Security by Default

The World's Most Secure Network. Delivered as-a-Service.

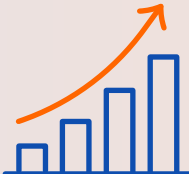

Proven. Measured. Guaranteed.

Improved TCO

Autonomous Operations

Enhanced Productivity

Stronger Security
