ZERO TRUST FABRIC

Guest | Employee | Printer | Camera

Nile's Leading-Edge Differentiation

1.
Cloud Zero Trust Security
Provides strong cloud-provider enforced encryption, compliance, and access control.

2.
Built-in IT Simplicity
Easy-to-use service natively leverages core Zero Trust Fabric authorization and enforcement with per-device visibility.

3.
Seamless IT and User Workflows
Access control is designed to take advantage of built-in authentication, authorization, and enforcement capabilities.

4.
Cloud Availability & Scale
Scales up or down depending on immediate needs freeing IT teams from traditional interoperability and deployment challenges.

5.
Predictable Reachability Model
Continuous Nile initiated checks that cloud-provider resiliency and failover features.

6.
Simplified Integration And Operations
Automated and seamless software updates and fixes, without legacy IT burden.

Nile Offers Unmatched Authentication and Operational Advantages

Natively Integrated Authentication
Device + user identity eliminates shared secrets to phish, removing entire class of credential-based attacks.

Instant Help Desk Productivity Boost
Tickets drop as forgotten passwords, being locked out, and user frustration is eliminated.

Unparalleled Cost Savings
Built-in monitoring, updates and cloud efficiency instantly saves IT resources and associated costs compared to third-party solutions.

Nile RADIUS Delivers 50% IT Resource Boost

For a large technology company, a complex 3rd-party NAC solution for primarily device authentication no longer made sense. Nile's secure add-on service eliminated difficult to maintain security policies, and costly time-consuming lifecycle operations.

> "With Nile's RADIUS Service, we no longer need to manage NAC infrastructure and troubleshoot site-specific authentication issues. Policy enforcement is centralized and tightly integrated—freeing up over 50% of the operational effort previously spent on NAC operations."
>

Nile Delivers Strong Authentication Without Complexity

1 Access is tied to identity, not VLANs, offering a new level of Zero Trust.

2 Connections are bound to a specific certificate and identity, improving incident response and audit traceability.

3 Multi-tenant, multi-site design eliminates all tenants from trusting the same CA chain.

Nile Makes RADIUS As Easy As 1, 2, 3

1.

Once activated, Nile RADIUS is mapped to existing certificate authority (CA).

2.

IT defines context-based segments (e.g., Employees, Contractors, IoT).

3.

Access privileges are defined by user and endpoint type and you're ready to go.

Related Services

Nile Access Service
ACCESS

Robust wired and wireless that supports today's evolving indoor and outdoor connectivity demands.
